

THE 7 KEYS TO **PROTEX KARTING's** SUCCESS

Why is **PROTEX KARTING** more profitable than any other barrier?

- 1. PROTEX KARTING** The only barrier in the World that automatically returns to its initial position after an impact.
- Spectacular aesthetics with several colours available and led lightning. Suitable for both **indoor** and **outdoor** tracks.
- 3. Easy to assemble and change trajectories.** Enhanced visibility for the pilot and spectators.
- 4. Six months warranty.** Even though **PROTEX KARTING** is almost **unbreakable**, that do not alter the absorption capability may appear at some strong impact areas (3% of the total installed barriers); is it just something merely aesthetic, rather than a safety issue, that is solved by simply covering the fissure with a polyethylene plate.
- 5. PROTEX KARTING** occupies less space than other barriers and it has a **very high impact absorption capability**, avoiding karts from collapsing the traffic after and impact. This is something especially important in indoor tracks; traffic is more fluid, and **revenue increases** as there can be **more karts racing** at the same time.
- Other protections may damage both the kart and the driver after an impact. However, a kart will rarely get behind a **PROTEX KARTING** barrier after an impact and, should it happen, the barrier would stop at the front of the kart. Additionally, an anti-elevation kerb may also be installed at critical high-speed impact areas for increase safety. **PROTEX KARTING** is with no doubt **the safest barrier in the market.**
- 7. PROTEX KARTING** means profitability, savings in personnel and time, increased kart lifetime, reduction in insurance costs. **PROTEX KARTING is a one-time investment that will last all the track lifetime.**

PROTEX KARTING The safest and most profitable barrier in the market.

Sold in 20 different countries.
